1.Question:

We were looking for more of a record of treatment that describes how many acres were treated, how much chemical was used, how often etc.

Response: The campus, including the ponds, is 170 acres and therefore would need 170 acres of treatment.

With the information provided in the ITB document regarding the University plan, and route information for spray along with the number of acres in need of treatment, the university relies on the expertise of the Respondent to validate material needs etc in order to execute a program plan.
